Re: OptiReader Ballot Result

Dear sir/madam,

We can confirm that PAC manufactured Multiwavelength Ellipsometric JFTOT Heater Tube Scanner (Model: OptiReader) cited in and balloted as Annex 4 Multi-Wavelength Ellipsometric Method has passed the Main Committee ballot and the revision to add Annex 4 to D3241 has been approved. The revision of D3241 Test Method for addition of the Annex 4 for the Multi-Wavelength Ellipsometric Method will proceed to be published within the month of October, as soon as the editorial process has completed at ASTM.

Sincerely,

Michael Collier
Product Manager
